

## Product information

# Control Master II 700

### Alcohol control

With Nimand alcohol system you get a quick, easy, safe and accurate dispensing of the predictive alcohol volumes. There are seven different price groups with text and pricing shown on the display at each outlet. The slope pourer is pressed into the bottle that has a conical plastic cork adapted to almost all types of bottles. Plastic wrapping ensures that nobody can remove the cork and drink is served outside the record or that is poured into another container than the original product. Floating line ensures easy disassembly and replacement of the plug at cylinder alternately. The pourer is designed so that it only pours when it pours through the pouring ring and registered in the device.

Nimand CMII 700 alcohol system may also include a count function for recording and counting of draft beer and postmix. This is recorded using flow meters and by reading and reset via the built-in display, or the facility may be connected to a ticket printer for printing of the sold.

Control Master II 700 is available with interfaces for interconnecting multiple devices. The device can also be controlled by a PC with Windows XP for easy configuration and report generation.
